Data management

- **10 million Synology systems sold**

Based on internal analysis of anonymized statistics.

- **50% of Fortune 500 companies deploying Synology systems**

Based on internal analysis of anonymized statistics.

- **Servers supporting 5 or more petabytes of storage**

Rounded up based on a fully expanded HD6500 system, which supports up to 4.8 PB with current-generation storage drives. Next-generation storage drives planned for future release will further increase maximum storage capacity.

- **Significantly faster RAID rebuilds**

Obtained through internal testing by Synology. DSM 7.0 supports “Fast repair” to only repair storage space that is in use. Actual RAID rebuild time may vary depending on the testing environment, usage, and configuration.

- **Full backups of Synology servers**

Requires Active Backup for Business Agent (DSM). Active Backup for Business must be installed on the destination server. Compatibility limitations apply.

- **Measurable reduction in customer issues and lower rate of hardware failure**

Based on internal analysis of customer support tickets.

- **6-year retention period for transaction-related records**

As per SEC Rule 17a-4 issued by the U.S. Securities and Exchange Commission. The specified retention period refers to non-immediate access records.

- **48% uplift in seq. write performance when using volume-based encryption**

Obtained through internal testing by Synology. Compared to transfer speeds against encrypted shared folders. Actual performance may vary depending on the testing environment, usage, and configuration.

- **Linear speed increases when using SMB multichannel**

Obtained through internal testing by Synology. Actual performance may vary depending on the testing environment, usage, and configuration.

- **900.000 active systems running Synology Drive managing over 300 billion files**

Based on internal analysis of anonymized statistics.

- **10x file indexing speed when using Synology Drive**

Obtained through internal testing by Synology. Actual performance may vary depending on the testing environment, usage, and configuration.

- **Time required for failover when using Synology High Availability**

Obtained through internal testing by Synology. Actual failover time may vary depending on the testing environment, usage, and configuration.

- **Scale-out cluster performance figures**

Obtained through internal testing by Synology using preliminary hardware and non-final software. May vary depending on development changes and testing environment, usage, and configuration.

Data protection

- **Over 320,000 active installations of the Active Backup software**

Based on internal analysis of anonymized statistics.

- **Active Backup Suite protecting 1 million endpoints and virtual machines and over 75,000 organizations/6 million accounts**

Based on internal analysis of anonymized statistics.

- **34% YoY growth for Active Backup for Business**

Based on internal analysis of anonymized statistics.

Infrastructure security

- **Surveillance Station connecting over 2.3 million IP cameras across nearly 500 thousand sites**

Based on internal analysis of anonymized statistics.

- **30% YoY growth for Surveillance Station**

Based on internal analysis of anonymized statistics.

- **Data loss minimized to seconds when using C2 Surveillance**

Obtained through internal testing by Synology. Actual amount of lost data may vary depending on the testing environment, usage, and configuration.

- **Active Insight leveraged to monitor over 1.4 million devices**

Based on internal analysis of anonymized statistics.
